

My First LaTeX Assignment

Nadia Ezzakate

September 27, 2025

Introduction

Hey world! This is my first document in $\text{\LaTeX}$. I want to learn how to structure text, use formatting, and create a clean PDF.

Main Content

Here is a paragraph with some **bold text** and some *italic text*. It helps emphasize important points.

Another paragraph shows how LaTeX treats multiple spaces: extra spaces are automatically reduced to a single space in the output PDF.

Sometimes we need words to stay together: Dr. Brown lives in New York City. The tilde () keeps these words on the same line.

Here is a small list of things I want to remember about LaTeX:

- Paragraphs are separated by blank lines.
- Special characters like %, \$, #, _ must be escaped.
- Footnotes add extra information without breaking the text¹.
- Hard spaces () prevent unwanted line breaks.

Conclusion

Overall, creating this document helped me understand the basics of LaTeX: paragraphs, formatting, lists, footnotes, and spacing. I am ready to explore more advanced features in the next assignments.

¹This is an example footnote.
